Assignment 2 · Marking Rubric

The report (R1 to R6, 90%) and the interview (10%), with band descriptors aligned to the validated module criteria

Parts and weights

Part	Weight	Learning outcomes
R1 · The law, the answer sheet and the model	15%	LO3, LO7
R2 · The benchmarked comparison	20%	LO3, LO7
R3 · Checks and limits	15%	LO3, LO7
R4 · Critical discussion: the person, LLMs, your way of working, the trend	25%	LO3, LO5, LO7
R5 · Reproducibility and process: repository, README, AI-use log, weekly steps	10%	LO5
R6 · Clarity and presentation of the report	5%	LO3, LO5, LO7
IV · Personal interview (in person)	10%	LO3, LO5, LO7

Each part is marked out of 100 using the bands below. Project mark = 0.15 × R1 + 0.20 × R2 + 0.15 × R3 + 0.25 × R4 + 0.10 × R5 + 0.05 × R6 + 0.10 × Interview. Module contribution = project mark × 0.5. All parts are marked by Dr Indrakshi Dey, with written feedback on each; the marks are entered on the marking record (document 05).

R1 · The law, the answer sheet and the model (15%)

Band	Descriptor
70–100%	Law, numbers, units and sources all correct and explained; answer sheet made two ways where possible and shown to agree; model correct, with loss curve, error and success test clearly reported.
60–69%	Law and answer sheet correct; model works and is reported, with minor gaps.
50–59%	Law and answer sheet mostly correct; model works but is reported thinly.
40–49%	Basic: errors in the law, numbers or answer sheet, or the model only partly works.
0–39%	Law or model missing or wrong.

R2 · The benchmarked comparison (20%)

Band	Descriptor
70–100%	Comparison complete and fair: accuracy, time per answer and size for every model; chart of error against examples; outside-the-range test; smallest passing model; a clear finding with a number.

Band	Descriptor
60–69%	Comparison complete with minor gaps or a less clear finding.
50–59%	Comparison partly complete, or not entirely fair.
40–49%	Comparison thin: one or two numbers without interpretation.
0–39%	No comparison.

R3 · Checks and limits (15%)

Band	Descriptor
70–100%	All three checks run, reported and interpreted; the wrong-law result and the law's limits are explained in terms of what they mean for the person.
60–69%	All three checks run and reported; interpretation slightly general.
50–59%	Checks partly run or reported without interpretation.
40–49%	One check only, or limits stated without evidence.
0–39%	No checks.

R4 · Critical discussion: the person, LLMs, your way of working, the trend (25%)

Band	Descriptor
70–100%	Critical insight throughout: a convincing account of the person and what changes; a well-argued view of when an LLM (including lean and scale-free models) would or would not suit the job; a specific, honest analysis of AI tools in the student's own workflow; a balanced, evidence-based trend assessment.
60–69%	Good analysis in all four parts; one part less developed.
50–59%	All four parts present but mostly descriptive.
40–49%	Some parts missing or superficial.
0–39%	Discussion missing or inaccurate.

R5 · Reproducibility and process: repository, README, AI-use log, weekly steps (10%)

Band	Descriptor
70–100%	Repository link works; it runs from the README with a fixed seed; regular commits; detailed AI-use log that matches section 8; every weekly step handed in on time.
60–69%	Repository runs; history, log or weekly steps have minor gaps.
50–59%	Repository runs with help; sparse history or log.
40–49%	Repository incomplete or hard to run; no log.
0–39%	No repository, or not reproducible.

R6 · Clarity and presentation of the report (5%)

Band	Descriptor
70–100%	Clear, well-structured and concise; every figure and table labelled and referred to; sources cited consistently.
60–69%	Clear, with minor lapses in structure or labelling.

Band	Descriptor
50–59%	Understandable, but uneven structure or unlabelled figures.
40–49%	Hard to follow in places.
0–39%	Disorganised or incomplete.

IV · Personal interview (in person) (10%)

Band	Descriptor
70–100%	Explains every part of their own code and results fluently and accurately; answers follow-up questions with insight; the AI-use log matches what they describe.
60–69%	Explains their code and results well, with minor hesitation on one part.
50–59%	Explains the main parts of their work, but needs prompting on details.
40–49%	Explains only parts of their work, with gaps or inaccuracies.
0–39%	Cannot explain their own submitted work.

Alignment with the validated criteria

The bands follow the module's validated assessment criteria: excellent critical insight (70–100%), good analysis with practical application (60–69%), sound understanding (50–59%), basic understanding (40–49%), and incomplete or inaccurate understanding (below 40%).
